Homework #5.

We executed fig 19_15-16 in a class. I also created its lecture video. Please see the link in the following parenthesis (https://youtu.be/3ZJB73G1zwQ ,Chap 19 Part3 (19.8-19.9)). In the lecture we made it to be executed in Bitnami WAMP (or MAMP)) or XAMPP.

In this HW#5, we want to execute it on AWS (Amazon Web Services, https://aws.amazon.com/).

So, you need to create an account by clicking the 'Sign in to the Console' button in the following figure:

After creating an account, we should install Apache2, MySQL, and PHP on EC2 Ubuntu.

In order to install them, please watch the YouTube video below:

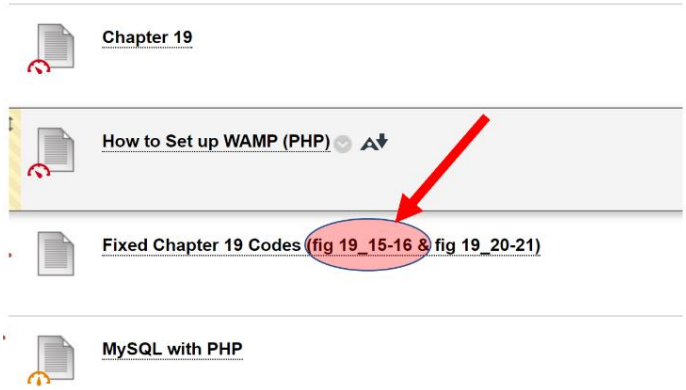

https://www.youtube.com/watch?v=x2MbZKamYaM&t=1121s

While looking at the video, you may get some help from the document, 'HW5 Related Document'

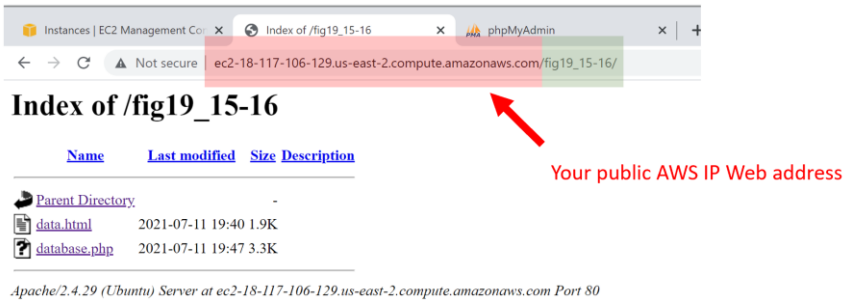

(cf, https://www.youtube.com/watch?v=flQ-KtaV6HU)

The above YouTube video explains all steps of installing them in detail. You need to follow step by step. After completing the installation, you are ready to execute fig 19_15-16 on AWS cloud. Of course, you should execute the file uploaded in the folder 'Course Resources' in the BrightSpace designated by red arrow in the following figure:

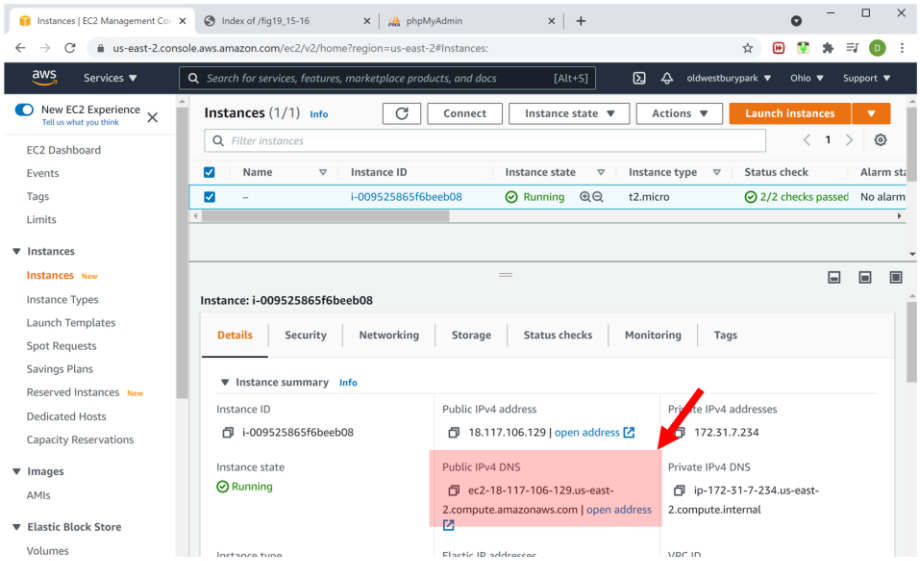

(You need to change both username and password of 'mysqli_connect' function in 'fig 19_15-16' codes by which you can connect MySQL)

After moving the codes (i.e fig 19_15-16) in AWS cloud, you can see a figure similar to the following image by typing your public AWS IP address on a browser :

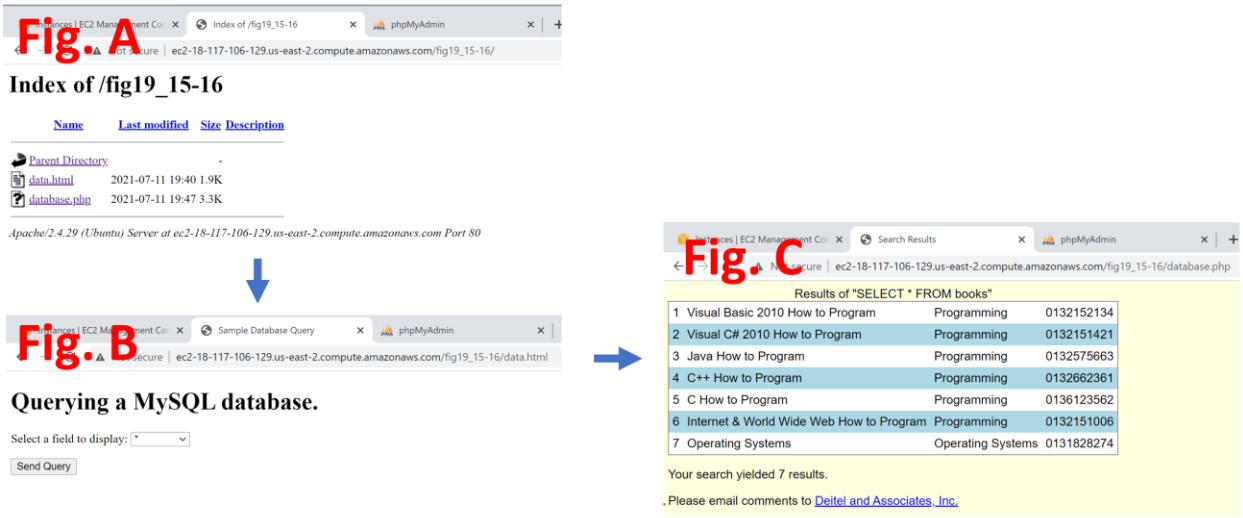

Please note that the public AWS IP address is same as the IP address pointed by the red arrow in the following figure:

So now, when click 'data.html' in Fig. A, you will see as the Fig. B. If you click the button 'Send Query' in the Fig. B, you will see the result in Fig. C as we did in our lecture video

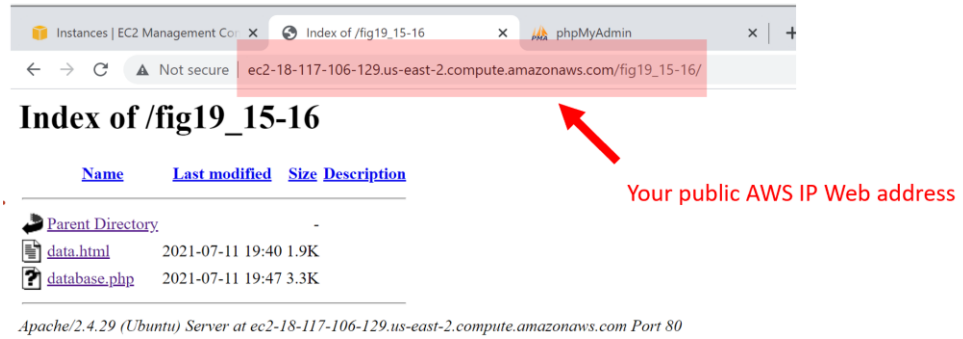

(https://youtu.be/3ZJB73G1zwQ).

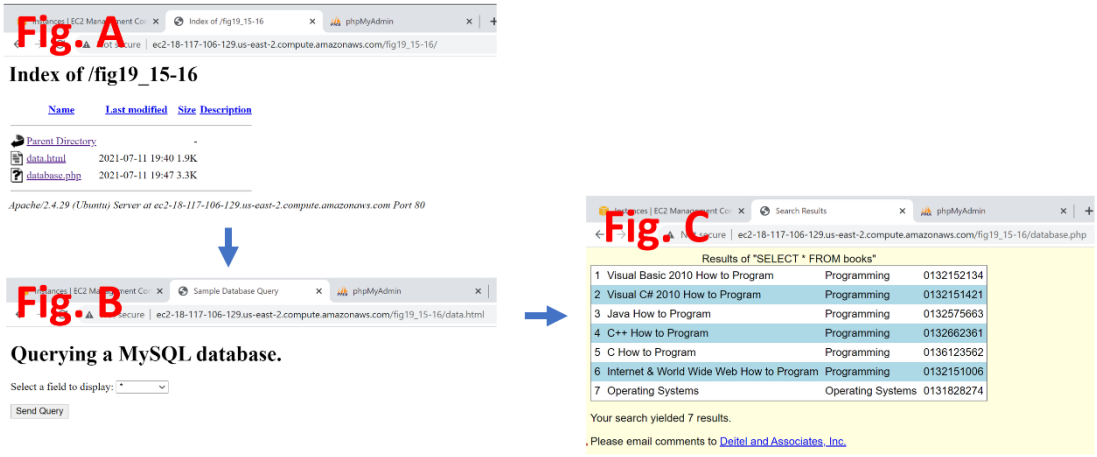

In sum, you should complete all the above steps.

After completing all steps, please create a word document that contains:

1) A photo of your face in the cover page.
2) Please copy and paste your public AWS IP Web address (similar to the IP address designated by the red arrow in the following figure) in the document.

3) Please include a YouTube link where you should explain how you moved the codes (in **fig 19_15-16**) to AWS cloud and the execution of the codes (in **fig 19_15-16**) on AWS

clouds depicted by the following figure: **(If you do not include the link, you will lose 40 points)**

The due date for this homework is by 11:59pm on July 14 (Saturday).

For this HW, there is no extension.

(For your help),
I put some example youtube video which was created by my previous students:
